French (native) · English C1 (fluent) · Spanish B1 (intermediate)

PROFILE

Final year Master's student in Machine Learning, AI and Data Science at Sorbonne Université, interested in building AI systems and finding out what actually makes them work better. Currently developing a new evaluation methodology for conversational AI agents, building on existing benchmarks. Previously reproduced a published baseline and developed a Transformer encoder that outperformed it, using ablation studies and explainability to investigate why. Particularly interested in agentic AI, experimental design, and rigorous model evaluation.

EXPERIENCE

Research Intern - Deep Learning for Speech Decoding
June - July 2026

Universitat Politècnica de València, Spain

- Reproduced a baseline from the literature, then built a Transformer encoder (PyTorch) for speech decoding from intracranial recordings that outperforms it: Pearson correlation of 0.77 vs. 0.68
- Cross-validation, ablations (temporal context, PCA), SHAP explanations, research report
- Currently testing new architectures for phoneme decoding, paper in preparation

EDUCATION

Master MIND - Machine Learning, AI and Data Science
2025 - 2027

Sorbonne Université, Paris, France

Year 1: Probabilistic models · Statistical learning · Optimization · Knowledge representation · NLP · IR
Year 2 (ongoing): Deep learning · LLMs · Computer vision · Explainable AI · Agent Evaluation · MLOps · Docker

Double Bachelor's Degree in Computer Science and Literature
2022 - 2025

Sorbonne Université, Paris, France

Final grade: 15.43/20 (High Honors, Mention Bien)

Semester Abroad
Jan - May 2025

University of Aberdeen, Scotland

PROJECTS

Conversational AI Agent Evaluation ONGOING

- Developing a new evaluation methodology for conversational agents in retail, airline, and telecom environments, building on τ^2-Bench.
- Multi-model evaluation pipeline to investigate how to assess agent performance across realistic customer-service tasks.

Stack: Python, LiteLLM, pytest

Clinical Data Integration Platform

- Integrated 22 clinical databases into an RDF knowledge graph containing over 1 million triples, with terminology normalization and dedicated parsers.
- Built a browser-based SPARQL query interface; optimized queries from tens of minutes to 50-370 ms.

Stack: Python, rdflib, SPARQL, Comunica, JavaScript

SKILLS

Languages : Python, C, SQL, JavaScript

ML Frameworks & Tools: PyTorch, Hugging Face Transformers, scikit-learn, NumPy, Pandas, SHAP, Git, Linux, Docker, Claude Code

ML Research & Evaluation: Model benchmarking, cross-validation, ablation studies, hyperparameter tuning, statistical analysis, explainability, agent evaluation

Data Engineering: Data preprocessing, feature engineering, ETL pipelines, RDF knowledge graphs (RDFLib, SPARQL)
